

Product facts

- Highly flexible cable and lead wires with minimal recoil
- Permanently attached, color coded lead wires
- Individual lead identification
- Low profile, high density design
- Available with various catheter connections
- Latex-free

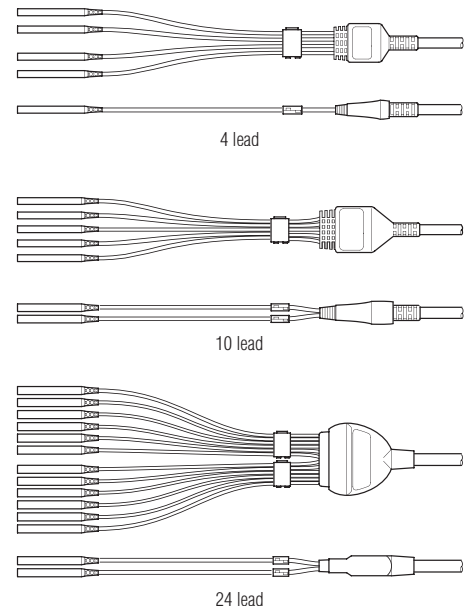

One-piece monitor systems for electrophysiology

For ablation systems, **Slimline-EP Trunk Cables with Lead Wires** comply with applicable portions of ANSI/AAMI HF-18 1993 for Electro-surgical Devices.

The compact, lightweight Slimline-EP trunk cable with lead wires features

permanently attached lead wires for mapping and ablation applications. The product family includes four, 10 and 24 lead yokes with leads of approximately 20 cm (8 in). On the 10 and 24 lead yokes, leads are stacked and held within plastic clips to improve wire management. Leads are terminated to shrouded, recessed gold DIN 2.0 mm (.080 in) pins (DIN 42802-2) to meet FDA requirements for safety.
